IBM ASSIGNMENT - 1

Team ID	PNT2022TMID50828
Project Name	Smart Farming Application

Thinkercad with 2 sensors, an,Led, buzzer :

Let's learn how to control multiple LEDs using Arduino's digital outputs and a breadboard. Expanding upon the last lesson on blinking an LED, We'll
connect some LEDs to the Arduino Uno and compose a simple program to light them up in a pattern.

You can follow along virtually using Tinkercad Circuits. You can even view this lesson from within Tinkercad if you like! Explore the sample

circuit and build your own right next to it! Explore the sample circuit in the workplane, and build your own along side it. Tinkercad Circuits is a free browser-based program that lets you build and simulate circuits. It's perfect for learning, teaching, and prototyping.

Program:
```
#include <ES P8266Wi Fi.h>
#include <ES P8266HTT PC lient.h>
#include <Adafruit A DS1015.h>
Wi FiC lient client;
